For some time, Classical German and early Analytic Philosophy seemed to represent two fundamentally different schools of thought. However, a more profound analysis reveals a continuity in their theoretical explorations. Both paradigmatic authors of Classical German Philosophy such as Kant and Hegel as well as pioneers of Analytic Philosophy such as Frege and Wittgenstein engaged deeply with questions about the nature of thinking, the role of language for thought, the feasibility of a science of logic beyond mathematical boundaries, and the complex interplay between thought and being. The conference aims to explore, discuss, and elucidate the historical and systematic connections between Classical German Philosophy (particularly the works of Kant and Hegel) and early Analytic Philosophy (with a focus on Frege and Wittgenstein), assessing their ongoing relevance.
